

Data Loss Prevention Deployment Summary

Document date: 2025-11-15 · Maps to NIST CSF PR.DS

1. Coverage

DLP is deployed on email gateways and managed endpoints with PHI/PII detection patterns.

2. Actions

Outbound email containing unencrypted PHI is quarantined; endpoint copy of PHI to USB generates an alert.

Gap

Cloud/SaaS egress (sanctioned file-sharing, GenAI assistants) is not covered by DLP, and removable-media writes are alerted but not blocked.

Sample document generated for CyberRx pilot testing. Fictional organization; not real PHI. This document intentionally omits some required elements so reviewers can verify gap detection.
