

Backup Test Results & Resilience Architecture

Document date: 2025-11-15 · Maps to NIST CSF PR.IR

1. Backups

Daily incremental and weekly full backups; immutable copies retained 35 days. Last restore test: 2025-10-02 (successful).

2. Resilience

Core claims platform runs in a single data center with nightly replication to a warm site. The member portal is single-region.

Gap

Automated high-availability/failover for critical systems is not implemented; recovery is manual.

Sample document generated for CyberRx pilot testing. Fictional organization; not real PHI. This document intentionally omits some required elements so reviewers can verify gap detection.
