

# Encryption Standard & Data-Flow Overview

Document date: 2025-11-15 · Maps to NIST CSF PR.DS

---

## 1. At Rest

Databases and storage use AES-256 encryption. Exception: the legacy claims database (CLAIMS-LEGACY) remains unencrypted pending migration.

## 2. In Transit

External and internal service traffic uses TLS 1.2 or higher. Email to providers uses opportunistic TLS.

## 3. Data Flows

Primary member-data flows are diagrammed. Batch/EDI interfaces with clearinghouses are not yet fully mapped.

Sample document generated for CyberRx pilot testing. Fictional organization; not real PHI. This document intentionally omits some required elements so reviewers can verify gap detection.
