

Security Operations Monitoring Coverage

Document date: 2025-11-15 · Maps to NIST CSF DE.AE

1. Tooling

A SIEM aggregates logs from endpoints, network, and cloud with correlation rules for common attack patterns.

2. Staffing

Security analysts monitor alerts during business hours (8x5). After-hours alerts are reviewed the next business day.

Gap

There is no 24x7 SOC or contracted MSSP for nights/weekends; detection-to-response time outside business hours is extended.

Sample document generated for CyberRx pilot testing. Fictional organization; not real PHI. This document intentionally omits some required elements so reviewers can verify gap detection.
