

Asset Inventory (CMDB Export)

Document date: 2025-11-15 · Maps to NIST CSF ID.AM

1. Hardware

CMDB tracks 3,120 endpoints and 410 servers with hostname, OS, and owner for most records.

2. Software

Installed software is inventoried via the endpoint agent and reconciled monthly.

Gap

Cloud workloads and IoT/medical devices are only partially represented, and the data-classification attribute is unpopulated for ~30% of assets.

Sample document generated for CyberRx pilot testing. Fictional organization; not real PHI. This document intentionally omits some required elements so reviewers can verify gap detection.
